Smart Probe* Connectivity			
Replaceable Battery			
Automatic PDF Report			

*Sold Separately

LogTag[®] Are You Using The Right Logger?

Above and Beyond Reliability

Trust is of utmost importance to LogTag[®]. That is why every single logger goes through temperature cycling and testing before they leave our warehouse. This guarantees the reliability of our products, so you can rest assured you have reliable and accurate loggers every time you buy a LogTag[®].

Introducing the Smart Probe

Using a Smart Probe means you will no longer need to send the compatible logger away for calibration. Only the Smart Probe needs to be sent for calibration, so you can have no downtime in accurate, reliable, real-time temperature monitoring.

A close-up photograph of a person's hand wearing a blue nitrile glove. The hand is holding a small, clear, cylindrical probe with a pink cap and is placing it into one of the wells of a white multi-well plate. The plate contains several other wells, some of which already have pink caps. The background is blurred, showing laboratory equipment like racks and other plates.
