FieldLink®

Bus cables & Industrial Ethernet cables

The FieldLink product family is designed to provide optimal solutions for all commonly used bus systems, making it a versatile choice for a wide range of industrial applications. Whether your needs involve AS-Interface, PROFIBUS, or PROFINET/Industrial Ethernet, FieldLink offers reliable and efficient connectivity to ensure seamless communication within your automation infrastructure.

As active members of various industry associations and user organizations, we are consistently engaged in shaping the future of automation technology. By participating in these associations, we stay at the forefront of emerging trends and technological developments, enabling us to offer solutions that are not only compliant with current industry standards but also aligned with future requirements.

In modern automation, the trend is moving towards increasingly complex bus systems that must handle all data transmission, from the supervisory level to the actuator/sensor level on machines, using more advanced cabling solutions.

At the same time, these new systems must meet or surpass the reliability and security of traditional industrial cabling.

Fields of application

Supervisory level

- IT communication – WAN
- Task ➤ visualisation, archival, e.g. control post, interference indicating station

Production and process control level

- Data communication – LAN
- Task ➤ system control, e.g. reception, administration

Actuator / sensor level

- Field communication (process signals)
- Task (operation level): processing, e.g. regulation/control of realtime functions
- Task (drive control): input and output, e.g. measure, regulate, move, switch

Motion control

- Field communication and power supply
- Task ➤ drive control with input and output and additional power supply

Green PROFINET

Our innovative PROFINET Green cables offer an eco-friendly, cutting-edge solution for industrial Ethernet applications.

These cables, crafted from plant-based materials instead of fossil fuels, set a new standard in sustainability.

The innovative PVC and PUR cables not only deliver exceptional performance and durability but also actively contribute to reducing the CO₂ footprint. Rely on connections that not only excel in reliability but also help preserve the environment.

Innovative jacket material made on plant basis

SPE – Single Pair Ethernet

Our Single Pair Ethernet (SPE) cables are designed to meet the demands of modern industrial communication.

Offering performance up to 1 Gbit/s at 600 MHz, these cables ensure reliable data transmission over distances up to 1000 meters. Built to withstand harsh environments, the SPE cables are oil-resistant, suitable for drag chains and torsional applications, and support Power over Data Line (PoDL).

Available in various jacket materials, including PUR, FRNC, PVC, and FEP, these cables provide versatile, high-performance solutions for any industrial setting. Trust BizLink's SPE cables to deliver the connectivity your operations require.

Ethernet-APL

Our new Ethernet-APL cable offers a comprehensive solution tailored for the evolving demands of process automation.

This cable supports smooth integration with Ethernet-APL while maintaining compatibility with existing PROFIBUS PA systems, providing a seamless transition for industrial setups.

Available in both trunk and spur versions, these cables are built to endure tough industrial conditions, being oil- and UV-resistant, which ensures long-lasting performance even in hazardous environments. With these cables, we deliver reliable and adaptable communication solutions that meet the rigorous needs of modern process automation.

Industrial Ethernet / PROFINET

Cable characteristics:

- Flame retardant
- Weld splatter resistant
- Sunlight resistant
- Oil resistant
- Cold resistant
- Chemical resistant
- Highly flexible
- For permanent installation
- For trailing applications
- Halogen free
- Silicon free
- Compliant acc. to RoHS

PROFIBUS

Cable characteristics:

- Flame retardant
 - Weld splatter resistant
 - Sunlight resistant
 - Oil resistant
 - Cold resistant
 - Chemical resistant
 - Insulation integrity (180 min)
 - Highly flexible
- For Permanent installation
 - Direct burial
 - For festoon applications
 - For torsional applications
 - For trailing applications
 - Halogen free
 - Silicon free
 - EMC cable for electromagnetic compatibility
 - Compliant acc. to RoHS

BizLink Special Cables Germany
is a member of PROFIBUS International.

DeviceNet™

Cable characteristics:

- Flame retardant
- Sunlight resistant
- Oil resistant
- Cold resistant
- Highly flexible
- For permanent installation
- Trailing cable
- Halogen free
- Silicon free
- Compliant acc. to RoHS

FieldLink[®] MC for Motion Control

- In drive technology, the trend is towards ever more complex cable systems and fully cabled modules. The quantity of data and speed of transmission are simultaneously rising rapidly.

Interference-proof, fixed and dragline-compatible feedback and power cables are required. In addition, harsh industrial environments require extremely robust, permanently flexible cables that are long-lasting and reliable under high mechanical loads.

BizLink provides cables and cable systems for motion-controlled drive mechanisms in machine tools (MC = motion control) under the brand name FieldLink MC. BizLink is able to meet the market's requirements through a smaller outer diameter, application-oriented cable assemblies and the use of special materials.

Feedback cables for Motion Control

Feedback cables for Motion Control enable the information supply of any drive in a factory. BizLink provides all current feedback cable types for up to date motion control standards and standardisation according to UL, CSA and DESINA.

FieldLink MC feedback cables provide the connected drive with the necessary data and programming of its potential. They also provide the information for positioning and control of the drive's actuation.

Assembly Information >

The FieldLink MC product range provides also cable system solutions optimised for drive technology with a large number of precisely harmonised components, reduced process costs as well as easy, safe and rapid installation. FieldLink MC cable systems consist of assembled, disruption-resistant BizLink feedback, power and hybrid cords for fixed installation or use in drag chains.

Power cables for Motion Control

FieldLink MC power cables are highly flexible and designed for either the single power supply of drives or the additional signal transmission via one or two twisted pair elements for brakes or thermal sensors.

They are standardised according to UL, CSA and DESINA and are highly EMC compatible as well as insusceptible to electrical interferences.

The cables are available for flexible and trailing applications optional with brakes and thermistor.

Assembly Information >

The FieldLink MC product range provides also cable system solutions optimised for drive technology with a large number of precisely harmonised components, reduced process costs as well as easy, safe and rapid installation. FieldLink MC cable systems consist of assembled, disruption-resistant BizLink feedback, power and hybrid cords for fixed installation or use in drag chains.

FieldLink[®] MC power cable

for permanent installation and flexible applications with low mechanical stress

- Very good EMC performance
- Flame retardant and self-extinguishing acc. to IEC 60332-1-2

Cable construction	
Conductor	Stranded bare copper wire acc. to IEC 60228 Cl. 6, wire identification power: U/L1/C/L+, V/L2, W/L3/D/L-, GNYE, signal: black, white
Core	Signal wire: twisted to pair, braidings of tinned copper wires (covering ≥85 %); pair and four wires twisted in layer with fillers in gaps and central filler
Shield	Shield braiding of tinned copper wires (covering ≥85 %)
Jacket	TPU orange acc. to RAL 2003

Technical data	
Nominal voltage	0.6 / 1 kV for power and 24 V for signal (DIN VDE), 1,000 V for power and signal (UL / CSA)
Test voltage	4 kV 50 Hz AC
Min. bending radius allowed	5 x outer diameter (single), 7.5 x outer diameter (repeated) for wire dimension ≤16 mm², 10 x outer diameter (repeated) for wire dimension ≥25 mm²
Max. acceleration	50 m/s² (164 ft/s²)
Process velocity	300 m/min (984.25 ft/min)
Bendings	10,000,000 at ≥7,5 x / 10 x outer diameter
Torsion	≤ ±30°/m (≤ ±3.28°/ft)
Horizontal length	max. 50 m (max. 164 ft)
Temperature range	–50 °C to + 80 °C (– 58 °F to +176 °F) fixed installation, –20 °C to + 60 °C (– 4 °F to + 140 °F) repeated, +150 °C (+ 302 °F) short-time (≤5 s)

Hybrid cables for Motion Control

FieldLink MC hybrid cables reach new heights in cost efficiency and flexibility. The innovative design combines energy supply and data transfer in one single cable, thereby reducing wiring expenditures by up to 85 %.

The cables withstand 5 up to 10 million bending cycles and significantly increases modularity in machines and systems.

Assembly Information >

The FieldLink MC product range provides also cable system solutions optimised for drive technology with a large number of precisely harmonised components, reduced process costs as well as easy, safe and rapid installation. FieldLink MC cable systems consist of assembled, disruption-resistant BizLink feedback, power and hybrid cords for fixed installation or use in drag chains.

Type designations for copper cables

B	armour
(2B...)	two layers of steel tape; thickness of one steel tape in mm
C	screen of copper wire braiding
FE 90	insulation integrity 90 minutes
FLI	flat cable with stranded conductor
FR	improved flame retardant
H	insulation or sheath of halogen-free material
J-	installation cable
-J	grounded wire, green-yellow
... IMF	separate stranding element in metal foil or in metallised paper and sheath wire (e.g. pairs PIMF)
KF ...	cold-proof implementation down to minus ... °C
L	wires with bunched conductor >0.2 mm²
LI	cord with stranded conductor <0.2 mm²
NC	non corrosivity of combustion gases
OE	oil-proof
(ST)	electrostatic shield made of metal foil or plastic laminated metal foil
VZN	tinned conductor
W	corrugated steel sheath
X	insulation, sheath or protective cover of cross-linked Polyvinylchloride (PVC)
2X	insulation, sheath or protective cover of cross-linked Polyethylene (PE)
11X	insulation, sheath or protective cover of cross-linked Thermoplastic Polyurethane (TPU)
Y	insulation, sheath or protective cover of Polyvinylchloride (PVC)
2Y	insulation, sheath or protective cover of Polyethylene (PE)
9Y	insulation, sheath or protective cover of Polypropylene (PP)
11Y	insulation, sheath or protective cover of Thermoplastic Polyurethane (TPU)
12Y	insulation of Polyethylene Terephthalate
99Y	insulation, sheath or protective cover of all other thermoplastics without VDE symbols
02YS	insulation of cellular Polyethylene (PE) with additional skin of solid material (foam skin)
02Y	insulation of cellular Polyethylene (PE)
-Z	wires with printed numbers

Installation guidelines

for flexible cables in energy tracking chains

Please abide by the following recommendations for BizLink cables used in energy tracking chains.

1. In order to conserve the high-quality characteristics, storage should be in closed spaces under observance of the temperature thresholds correspondingly stated.
2. To ensure easy installation under optimal mechanical conditions, cables should be stored at room temperature for at least 24 hours before use.
3. Cables should be stored in cable drums until final installation. Repeated winding of the cables onto different reels should be avoided whenever possible.
4. The choice of energy tracking chains must follow the characteristics of the cables in use.
5. The bending radii of the cables must not fall short of the specified values.
6. Installation of the cables in energy tracking chains must be torsion-free. Cables must never be pulled sideways from the drum or ring, but tangentially rolled off immediately before use. If necessary, lay or hang the cables out before use.
7. Within the energy tracking chains, the cables have to be loosely laid out side by side without friction. Freedom of movement must be ensured. Make sure there is free space amounting to at least 10 % of the cable diameter on all sides, without exceeding 50 % in width. For optimal adjustment, place single cables separated by fixed links. Placing cables on top of each other (i.e. without fixed links) should be avoided whenever possible. Cables of different outer diameters and conducting materials should be installed separately.
8. In order to prevent cables from restricting each other's movement, vertically suspended energy tracking chains should allow for free space of at least 20 % of the cable diameter above and below the cable.
9. Cables within an energy tracking chain must retain freedom of movement in the longitudinal direction at all times. Use of fixations and/or guiderails is prohibited. No tensile force is to be effected in the radius.
10. In order to ensure the freedom of movement of the cores, cables must extensively be fixed by the outer jacket at both ends of the energy tracking chains. Movement up to the points of fixation, however, is prohibited. Proximity to the nearest pivot point of the chain is 20 x cable diameter at maximum.
11. After a short period of operation, it is imperative to verify proper cable adjustment (stretching during operation, contortion). Verification checks have to take place after a few completed cycles each. If necessary, return the cables to center position and readjust the cable-length at the entrainer. Make sure the cable does not fly out at the inner or outer radius. Cable adjustment must be rechecked after a few test runs and should be verified every six months.
12. In the event of fracture or other damage to the energy tracking chain, all cables must be replaced. Permanent damage resulting from contortion, indentation or shearing is to be expected.

Drag chain test centre

Ensuring long-lasting dynamic requirements

We are always investing in our device equipment to satisfy the needs of our customers. The long-lasting mobility of our cables is tested in various processes in order to prove their long service life.

Drag chain tests

Our test routes have different travel ranges, accelerations and travel speeds. Each test system can test up to 40 cables over the equivalent of several years. The longest traverse path measures 50 m.

Torsion tests

In different torsion and torsional bending machines, the cables are tested for twisting and traction around themselves. They are subjected to a torsional movement of up to $\pm 360^\circ$ in length from 0.3 to 1 meter.

Bending tests

In test systems with rolls for different bending radii, a test is performed to see whether the cable withstands frequent bending cycles. The rolls used have a diameter of 20 to 250 mm.

S-shaped bending test

The cable is fed across two bobbins in an s-shaped flex movement. As an option and as required, weights can be fitted to both ends. The line generates up to 12 cycles per minute.

To pass the flex test, the cable may not present any power failure between the cores.

These guidelines are based on field experience with BizLink cables; they are not grounds for demands of warranty and / or recourse. Please also refer to the installation guidelines provided by the manufacturer of the energy tracking chain.

BizLink checks the quality of the cables in their in-house test centre. Discover the competence here.

The significance of UL and CSA certifications

	Approval only for Canada	Approval only for USA	Approval for Canada + USA
The two organisations, UL and CSA International, are recognised in Canada and in the USA. They issue various test marks according to validity.	 	 	 
The test mark (UR) identifies products which are integrated as components in electrical equipment (recognised mark).			

Before electrical products are allowed onto the North American market they have to be tested and certified as to their hazard potential in respect of combustibility, electric shock and – for certain equipment – electromagnetic compatibility.

To comply with product liability laws a manufacturer has to ensure by the testing and certification of his components that they fully satisfy national statutory requirements.

- Certification for the USA:**
Certifications have to be issued by a Nationally Recognized Testing Laboratory (NRTL). NRTL status is awarded by the Occupational Safety and Health Administration (OSHA), e.g. >
- UL (Underwriters Laboratories)
 - CSA International (Canadian Standards Association)
 - ITSNA (Intertek Testing Service NA, Inc.)
 - TUV Rheinland of North America

- Certification for Canada:**
Certifications have to be issued by a qualification office recognised by the Standards Council of Canada (SCC), e.g. >
- CSA International
 - UL
 - ITSNA

About BizLink

Innovative. Reliable. Sustainable.

Founded in 1996 and headquartered in Silicon Valley, USA, BizLink is dedicated to making transformative connections that bring visionary ideas to life.

We specialize in providing essential components such as wire harnesses, connectors, and cables to a broad spectrum of industries including IT Infrastructure, Client Peripherals, Optical Fiber Communications, Telecom & Networking, Electrical Appliances, Medical Equipment, Factory Automation & Machinery, Semiconductor Technology, Healthcare, Motor Vehicles, Mobility, Marine, Industrial, and Solar Energy.

Our global presence, with flexible production resources and R&D teams across America, Europe, and Asia, allows us to proactively drive innovation and enable future possibilities.

At BizLink, our customer-centric approach and commitment to relentless advancement empower us to deliver zero-distance service and continual performance optimization, making a positive and meaningful impact worldwide. We turn possibilities into reality; furthermore, we connect possibilities to world-changing visions.

Factory Automation & Machinery in all their diversity

Global presence.
Innovative products, engineering
and logistic services.
Technological & quality advantages.

With innovative solutions for intelligent energy and data management in automated production processes, BizLink has been a preferred supplier to numerous automotive, factory automation, and machinery customers worldwide for years.

At our international competence centers, BizLink leads the development and manufacturing of bus cables, industrial Ethernet, and motion control cables. We also offer comprehensive cable systems and services. Our product range is further enhanced by connector development and production, along with the provision of assembled drag chains. As an active member of various associations and user organizations, BizLink stays at the forefront of industry activities, actively contributing to the advancement of industrial communication.

In addition, BizLink provides robotic cables and assemblies, hoses and tubes, dresspack systems, integration-ready robots, robot programming, and automation systems training - instructor-led or online. In response to the growing trend of digitalization, BizLink also offers integrated and intelligent sensor-based measurement solutions.

Moreover, BizLink develops customized special cables and assemblies, as well as complex cable systems. Whether it involves meeting specific requirements for mechanical durability, resistance to radiation and media, electrical transmission properties, or compliance with industry standards and norms, BizLink meets the demanding needs of various industrial applications.

BizLink has demonstrated its industrial expertise to machine builders, line and plant operators, as well as robot and measuring device manufacturers around the world. Whether your organization is a global OEM or a tier supplier, BizLink is ready to help you solve your most challenging industrial design and equipment needs.

Our strong focus on service and expanding product diversification drives us to continue developing these markets. With our broad product range, BizLink addresses market challenges through ongoing collaboration with technology leaders and user organizations, actively developing products and services to meet future trends, particularly in response to increasing digitalization.
